The Leader in Expert Solutions™

Spot Activity Audit® Workshop

This one-day workshop is an Environmental, Health and Safety (EHS) and Quality Assurance audit process for supervisors, managers, and safety professionals. **Class Limit: 10 Students**

The Spot Activity Audit (SAA) uses a non-confrontational approach that creates outstanding results. The audit may be fully incorporated into a standard walk-around audit or used as an additional management tool to enhance your company's present auditing program.

Workshop Outline

Segment I – Introduction

- The Spot Activity Audit is a system, based upon proven and time-honored audit principles, used by industry safety leaders worldwide. It is our refinement and enhancement of tested principles that achieves most favorable and prompt results.
- *Example.* Within a year of using our audit technique, a prominent oil & gas company moved from the bottom to the top 10% in safety performance while achieving ISO 14001 certification. SAA was credited for this company's amazing safety success story.
- Additional benefits include improved productivity, improved work force morale, and enhanced communication between workers and supervisors.

Segment II – Overview of the Process

- SAA is a simple process that can be used in any industry or work environment. Since most accidents are based on unsafe acts, our audit uses the line-authority of supervisors, managers and safety professionals to help identify those unsafe acts and, in a positive manner, eliminate them.
- *Example.* Supervisors include the Spot Activity Audit during their daily walk around, observing the workers and especially those activities with higher risks.

Segment III – Implementing the Process

- The process for implementing the Spot Activity Audit into a work environment involves the following 2 steps:
 1. Senior management orientation
 2. Line supervisor training sessions
- SAA Options include:
- Mentoring
 - Train the trainer sessions
 - Follow-up visits

CERTIFICATES OF ACHIEVEMENT WILL BE ISSUED TO
STUDENTS THAT SUCCESSFULLY COMPLETE THIS WORKSHOP
